

3D PRINTING TO WATER STEWARDSHIP

Indian firms step up for planet's health

Climate-friendly measures include apps that help employees track and reduce their carbon footprint

AHONA CHAKRAVARTY
New Delhi, 28 May

THE CHALLENGES

Earlier this month, the Council of Scientific and Industrial Research (CSIR) launched a unique initiative with the health of the planet in mind. It encouraged its employees across India to forgo ironing on Mondays, and instead turn up in wrinkled clothes.

The campaign was rooted in the idea that if millions of Indians skipped ironing just once a week, a good deal of energy would be saved, and it would significantly reduce carbon emissions.

Across India's corporate landscape, various companies are coming up with offbeat eco-friendly ideas.

Recently, to build its office in Khalapur, Maharashtra, Godrej and Boyce decided to forgo traditional construction methods altogether. Instead, the Godrej group's flagship company turned to 3D construction printing. The result was a small, 48-square-metre office, aptly named "The Cocoon", built in 40 hours flat.

"Besides being efficient, 3D printing allows for complex, customised architectural features at comparatively lower costs," explains Tejashree Joshi, head of environment and sustainability at Godrej & Boyce.

The technology also enables the use of recycled material. "The recycled concrete aggregates used are from the construction and demolition debris recycled at the Godrej recycled concrete material plant, which is powered by 100 per cent

Godrej and Boyce built a 48-square-metre office, named "The Cocoon", in 40 hours using 3D printing

3D construction printing requires significant initial investment and skilled operators. "There's broader industry resistance to adopting new methods, which can slow down its integration into mainstream construction practices," says Tejashree Joshi, head of environment and sustainability, Godrej & Boyce.

renewable energy," Joshi says.

This approach diverts waste from landfills and reduces reliance on virgin construction materials.

Signify, earlier called Philips Lighting, has also introduced 3D-printed luminaires made from 100 per cent recyclable polycarbonate material. The company invested 271

million euros – 88 per cent of its R&D expenses – in sustainable innovation globally in 2023.

In 2021, the firm launched an A-class 210 lumens per watt bulb with a lifespan of up to 50,000 hours – that is a little over five years and seven months. The firm also removed an average of 2,500 tonnes

of plastic from its product packaging, equivalent to almost 125 million half-litre polyethylene terephthalate (PET) bottles. "Our packaging is also smaller, helping reduce 6,000 tonnes of CO2 emissions per year," says Nikhil Gupta, head of marketing, strategy, and government affairs at Signify.

Tech firm Zoho's campus in Guduvanchery, Chennai, meanwhile, incorporates green design elements with rainwater management systems. The 1.5-acre campus can store over 45 million litres of water, which helps replenish groundwater levels and mitigates the impact of natural calamities.

"During excessive rains, the infrastructure allows the water from the terraces and roads across the campus to be diverted to the underground storage tanks and then to the pond area," says Praval Singh, vice president of marketing and customer experience at Zoho Corp.

When the ponds fill up, the overflow goes into the main storm-water drainage.

The campus also uses water from a well for household needs and for fire hydrants. Singh says the stored water can serve more than 12,000 Zoho employees on the campus for 3-4 days in case of emergencies.

During Cyclone Michaung, which struck Chennai in December last year, the rainwater management system helped prevent waterlogging inside the Guduvanchery campus.

British banking and insurance firm NatWest Group decided to make the climate fight personal when it launched the Giki Zero app

in 2021. The app helps employees track and reduce their carbon footprint by helping them calculate their electricity, water and gas usage, explains Saurabh Gupta, head of finance and climate champion network sponsor at NatWest Group, India.

IT major Infosys, too, has implemented a range of sustainability measures over the past decade, including innovative cooling systems, 100 per cent food waste recycling, and ultra-low-flow taps to conserve water. "These steps were pioneering when implemented and set new benchmarks for sustainability," says Guruprakash Sastry, associate vice president and regional head-infrastructure at Infosys.

Hindustan Zinc, a subsidiary of Vedanta Ltd, which aims to drastically reduce its emissions, has set up a 60 million litres per day sewage treatment plant in Udaipur, Rajasthan, through public-private partnership. "This plant has so far reduced freshwater dependence by 36 per cent," says Pradeep Singh, chief health, safety, environment and sustainability officer, Hindustan Zinc. The company has also implemented zero liquid discharge plants at its smelters and mines, so that industrial wastewater is not pumped back into the environment. It also highlights its use of battery electric vehicles in underground mining at its Rajpura Dariba complex in Rajasthan and LNG vehicles for logistics, besides a dry tailing plant at Zawar Mines near Udaipur that has enabled the reuse of over 80 per cent of processed water.

2nd phase of coastal road to open by June 10: Maha CM

PRESS TRUST OF INDIA
Mumbai, 28 May

Maharashtra Chief Minister Eknath Shinde on Tuesday said the second phase of the coastal road between Worli and Marine Drive will be opened by June 10.

Shinde also inspected a leakage at the southbound tunnel at Marine Drive end, which is a part of the first phase of the coastal road inaugurated in March. Talking to reporters after the inspection, the chief minister said there were leakages in two to three expan-

sion joints of the coastal road, and they will be plugged using polymer grouting.

Shinde said he has also suggested polymer grouting on all 25 joints on each side of the tunnel to avoid water seepage even during monsoon.

The repair work will not impact the vehicular movement on the coastal road, and motorists won't be inconvenienced, he said. The chief minister said the second phase of the coastal road from Marine Drive to Worli will be thrown open to traffic by June 10.

Shinde said leakages in 2 to 3 expansion joints will be plugged

XIAOMI 14 CIVI LAUNCHING IN INDIA ON JUNE 12

The Xiaomi 14 Civi will be based on the Civi 4 Pro, which was launched in China last month. The camera-focused smartphone will feature a triple-camera system co-engineered in partnership with German imaging entity Leica. It will be launched in the premium ₹40,000-50,000 smartphone segment.

Assassin's Creed Shadows coming on Nov 15

French video game publisher Ubisoft recently unveiled the trailer for the Assassin's Creed Shadows, its next major title in the Assassin's Creed series. Set in 16th century Japan, the video game goes through the Feudal Era of the country where it was facing a brutal unification attempt. The video game will be released globally on November 15 on Macs, PCs, and gaming consoles.

WhatsApp doubles duration limit for voice notes status

Meta's instant messaging platform WhatsApp has introduced a new feature that allows users to share one-minute long voice notes as status updates, doubling on the previous limit of 30 seconds. This feature is currently rolling out on WhatsApp for iOS and Android.

High vegetable prices raise the 'heat' in election season

SANJEEV MUKHERJEE
New Delhi, 28 May

Food inflation has emerged as one of the main talking points of the ongoing Lok Sabha polls.

Uneven weather coupled with prolonged heat waves and low post-2023 monsoon rains in several parts of the country has impacted supplies of major vegetables in 2024.

Though, on a week-on-week basis, there has been some moderation in prices but compared to last year, prices of most major vegetables have seen a sharp spike.

Among vegetables, potato prices have been particularly noteworthy due to the sharp spike in prices seen since March 2024.

Traders said some damage to the crop which has pulled down output and high storage and transportation costs has pushed up prices of potatoes this time.

High vegetable prices are expected to keep food inflation firm in the months to come. "Heat waves have swept several parts of the country over the last few weeks with states such as Gujarat and Rajasthan experiencing 9-12 days of heat waves (higher than normal). This has added to price pressures for vegetables, fruits, milk, pulses among others. While significant, the price pressures due to severity of heat

NO RESPITE Wholesale prices of vegetables in Delhi's Azadpur mandi (₹ per quintal)

waves in May 24 looks to be somewhat less than historical trend. As such there is likely to be downside risk to our estimate of a severe heat wave adding close to ₹200 bps to perishables inflation and ₹25-30 bps to headline CPI inflation," QuantEco Research said in a note.

Going forward, the trajectory of southwest monsoon will determine how veggie prices fare in the coming months.

A good and early monsoon will help boost supplies and pull down prices, but a prolonged dry spell will keep prices on the boil as vegetables tend to get damaged quickly in intense heat.

This is all the truer for India as the country's storage and transportation infrastructure for fresh fruits and vegetables is grossly inadequate in comparison to the volume of production.

Dr Vishwas Chitale, senior programme lead, Council on Energy, Environment and Water (CEEW) suggested in a note that to build resilience against heat wave, India's heat action plans must shift from a response-centric to a preparedness-centric approach, mapping granular-level heat risks to help administrators prioritise health interventions. Delhi's maximum temperature touched almost 50 degrees Celsius on Tuesday in some centres.

SUSTAINABLE EFFORTS TOWARDS GROWING PROSPERITY

3D PRINTING TO WATER STEWARDSHIP

Indian firms step up for planet's health

Climate-friendly measures include apps that help employees track and reduce their carbon footprint

AHONA CHAKRAVARTY
New Delhi, 28 May

THE CHALLENGES

Godrej and Boyce built a 48-square-metre office, named "The Cocoon", in 40 hours using 3D printing

3D construction printing requires significant initial investment and skilled operators. "There's broader industry resistance to adopting new methods, which can slow down its integration into mainstream construction practices," says Tejjashree Joshi, head of environment and sustainability, Godrej & Boyce.

renewable energy," Joshi says.

This approach diverts waste from landfills and reduces reliance on virgin construction materials.

Signify, earlier called Philips Lighting, has also introduced 3D-printed luminaires made from 100 per cent recyclable polycarbonate material. The company invested 271

million euros – 88 per cent of its R&D expenses – in sustainable innovation globally in 2023.

In 2021, the firm launched an A-class 210 lumens per watt bulb with a lifespan of up to 50,000 hours – that is a little over five years and seven months. The firm also removed an average of 2,500 tonnes

of plastic from its product packaging, equivalent to almost 125 million half-litre polyethylene terephthalate (PET) bottles. "Our packaging is also smaller, helping reduce 6,000 tonnes of CO2 emissions per year," says Nikhil Gupta, head of marketing, strategy, and government affairs at Signify.

Tech firm Zoho's campus in Guduvanchery, Chennai, meanwhile, incorporates green design elements with rainwater management systems. The 1.5-acre campus can store over 45 million litres of water, which helps replenish groundwater levels and mitigates the impact of natural calamities.

"During excessive rains, the infrastructure allows the water from the terraces and roads across the campus to be diverted to the underground storage tanks and then to the pond area," says Praval Singh, vice president of marketing and customer experience at Zoho Corp.

When the ponds fill up, the overflow goes into the main storm-water drainage.

The campus also uses water from a well for household needs and for fire hydrants. Singh says the stored water can serve more than 12,000 Zoho employees on the campus for 3-4 days in case of emergencies.

During Cyclone Michaung, which struck Chennai in December last year, the rainwater management system helped prevent waterlogging inside the Guduvanchery campus.

British banking and insurance firm NatWest Group decided to make the climate fight personal when it launched the Giki Zero app

in 2021. The app helps employees track and reduce their carbon footprint by helping them calculate their electricity, water and gas usage, explains Saurabh Gupta, head of finance and climate champion network sponsor at NatWest Group, India.

IT major Infosys, too, has implemented a range of sustainability measures over the past decade, including innovative cooling systems, 100 per cent food waste recycling, and ultra-low-flow taps to conserve water. "These steps were pioneering when implemented and set new benchmarks for sustainability," says Guruprakash Sastry, associate vice president and regional head-infrastructure at Infosys.

Hindustan Zinc, a subsidiary of Vedanta Ltd, which aims to drastically reduce its emissions, has set up a 60 million litres per day sewage treatment plant in Udaipur, Rajasthan, through public-private partnership. "This plant has so far reduced freshwater dependence by 36 per cent," says Pradeep Singh, chief health, safety, environment and sustainability officer, Hindustan Zinc. The company has also implemented zero liquid discharge plants at its smelters and mines, so that industrial wastewater is not pumped back into the environment. It also highlights its use of battery electric vehicles in underground mining at its Rajpura Dariba complex in Rajasthan and LNG vehicles for logistics, besides a dry tailing plant at Zawar Mines near Udaipur that has enabled the reuse of over 80 per cent of processed water.
